Application Examiner:

Northwest EMC Test report # KMWC0036.1 was used to support a Class II Permissive change for FCC ID: ZUQ849144415 issued March 7, 2013. After the grant was issued, KMW U.S.A., INC. determined that the grant should have a slightly different frequency range and increased level of output power.

Subsequent testing and investigation led us to conclude that likely the test data used in the original report # KMC0036.1 had an inaccurate amplitude offset in the spectrum analyzer.

We have issued a revised test report to # KMWC0036.1 that contains data with accurate amplitude offset in the spectrum analyzer.
